

The ltx-talk class

A replacement for beamer which allows PDF tagging

Overleaf Support

What is it?

How can I use it?

ltx-talk on CTAN

Please see CTAN (ctan.org) for more information about ltx-talk.

As mentioned there,

- `ltx-talk` class is focused on producing (on-screen) presentations, along with support material such as handouts and speaker notes.
- `ltx-talk` class has syntax similar to the popular `beamer` class, although there are some (deliberate) differences.
- `ltx-talk` has been implemented to support creation of tagged (accessible) PDF output as a core aim. As such, it is suited to creating output for reuse in other formats, e.g. HTML conversions, without additional steps.

ltex-talk with Overleaf

`ltex-talk` is available on Overleaf, but it requires a few special settings.

- The `ltex-talkclass` requires \LaTeX 2025-11-01 or later.
- Currently, this version is only available on Overleaf through the "rolling TeX Live" versions available through **Overleaf Labs**.
- The PDF tagging support requires the use of the LuaLaTeX compiler.

A richer example

A more involved example using `ltex-talk` is available for download as a zip file from the class author's blog: <https://www.texdev.net/2025/07/12/ltx-talk-a-new-class-for-presentations>. The zip file provided there can be uploaded to Overleaf to create a project, but the TeX Live version must be updated to be the "rolling" version and the compiler must be updated to be LuaLaTeX.
